### **Executive Summary**

To help inform future decisions and strategic planning, Rolette County Public Health conducted a community health needs assessment in Rolette County. The Center for Rural Health at the University of North Dakota School of Medicine and Health Sciences facilitated the assessment, which included the solicitation of input from area community members as well as analysis of community health-related data. The administrator from Rolette County Public Health, helped to coordinate assessment activities.

To gather feedback from the community, residents of the county were given the chance to participate in a survey. Approximately 589 Rolette County residents took the survey. Additional information was collected through a Community Group comprised of community members and through key informant interviews with community leaders. Thirty-four residents participated as a Community Group member, key informant interviewee, or both. The input from all of these residents represented the broad interests of the communities of Rolette County. Together with secondary data gathered from a wide range of sources, the information gathered presents a snapshot of health needs and concerns in the community.

In terms of demographics, Rolette County tends to differ from most state averages. According to U.S. Census estimates, Rolette County has a population in 2015 of 14,582. More than three out of four county residents identifies as American Indian or Alaska Native. Rates of high school graduation are lower than the North Dakota average, with Rolette County at 65% as compared to the state average of 85%.

Data compiled by County Health Rankings show that with respect to health outcomes, Rolette County is faring worse as compared to North Dakota as a whole, with a higher incidence of premature death and more residents reporting poor or only fair physical and mental health. There is also room for improvement on individual factors that influence health, such as health behaviors, clinical care, social and economic factors, and the physical environment. Factors on which Rolette County was performing poorly relative to the rest of the state included:

- Low birth weight
- Adult smoking
- Adult obesity
- Unemployment
- Teen birth rate
- Children in poverty

- Injury deaths
- Excessive drinking
- Severe housing problems
- Sufficient numbers of primary care physicians and dentists

Of 86 potential community and health needs set forth in the survey, Rolette County residents taking the survey expressed, a distinct concern about alcohol use and abuse in their community. They chose the following five needs as the most important:

- 1. Alcohol use and abuse (including binge drinking)
- 2. Diabetes
- 3. Teen pregnancy
- 4. Youth sexual health (including sexually transmitted infections)
- 5. Youth alcohol use and abuse (including binge drinking)

When asked what the good aspects of the county were, respondents indicated that the top community assets were:

- Family friendly
- Friendly and helpful people
- Simple, laidback lifestyle
- Recreational and sports activities
- Quality school systems and programs for youth

Input from Community Group members and community leaders provided via a focus group and key informant interviews echoed many of the concerns raised by survey respondents. Thematic concerns emerging from these sessions were:

- Lack of collaboration within community
- Lack of employment/poverty
- Activities/services for youth
- Mental health (including substance abuse)

The Community Group held its second meeting on October 29, 2015. A representative from the Center for Rural Health presented a summary of this report's findings. Following the presentation of the assessment findings, the group was asked to identify what they perceived as the top six community health needs:

- Excessive drinking adults and youth (16 votes)
- Activities and services for youth (14 votes)

- Illicit drug abuse (13 votes)
- Lack of collaboration with the community (11 votes)
- Number of healthcare providers (10 votes)
- Unemployment (10 votes)

The group has begun the next step of strategic planning to identify ways to address significant community needs.

### **Overview and Community Resources**

The purpose of conducting a community health assessment is to describe the health of local people, identify areas for health improvement, identify use of local health care services, determine factors that contribute to health issues, identify and prioritize community needs, and help health care leaders identify potential action to address the community's health needs. A health needs assessment benefits the community by: 1) collecting timely input from the local community, providers, and staff; 2) providing an analysis of secondary data related to health-related behaviors, conditions, risks, and outcomes; 3) compiling and organizing information to guide decision making, education, and marketing efforts, and to facilitate the development of a strategic plan; and 4) engaging community members about the future of health care. Completion of a health assessment also is a requirement for public health departments seeking accreditation.

With assistance from the Center for Rural Health at the University of North Dakota School of Medicine and Health Sciences, Rolette County Public Health District completed a community health assessment of Rolette County, which is a single county health district. Many community members and stakeholders worked together on the assessment.

As illustrated in Figure 1, Rolette County is located in the North Central portion of North Dakota. The county seat is Rolla, which lies on the eastern edge of the county near the Turtle Mountain Indian Reservation. The 2014 estimated population of Rolette County was 14,616. Rural Rolette County has several incorporated cities, including Rolla (1,337), Dunseith (797), Rolette (594), St. John (360), and Mylo (21).

Figure 1: Rolette County, North Dakota

#### **Rolette County Public Health District**

Rolette County is a single county health district. It provides public health services that include environmental health, nursing services, and the WIC (women, infants, and children) program. Each of these programs provides a wide variety of services in order to accomplish the mission of public health, which is to assure that North Dakota is a healthy place to live and each person has an equal opportunity to enjoy good health. To accomplish this mission, Rolette County Public Health is committed to the prevention of disease, promotion of healthy lifestyles, protection of the environment, through the provision of quality health care services for the people of North Dakota.

#### **Specific services provided by Rolette County Public Health are:**

- School Health
- Chronic Disease Monitoring
- Car Seat Program
- STD Testing/Treatment, Hepatitis C/HIV Testing
- Well Child Check
- CPR and First Aid Training
- Fluoride Varnish
- Flu Shots
- Health Tracks (child health screening)

- Prenatal/Breastfeeding Education (pump rental)
- Pregnancy testing
- Preschool/Head Start Screening
- Immunizations (adult or child)
- Environmental Health
   Services (water, sewer, health
   hazard abatement)
- Worksite Wellness

- Tobacco Prevention and Control
- Tuberculosis Testing and Management
- WIC (Women, Infants & Children) Program
- Women's Way

#### **Other Community Resources**

Many of the necessary services for county residents are located in Rolla, Dunseith, Rolette and St. John, but several smaller communities throughout the rural area do have services for residents as well. The Turtle Mountain Indian Reservation is situated within Rolette County. Belcourt is the core city within the reservation. "The Turtle Mountain Tribe has existed as an autonomous government within the United States because early treaties recognized the Band's sovereignty. The United States government promised "health, education, and welfare" in exchange for aboriginal lands. This unique relationship gives rise to several institutions that manage these services including the Bureau of Indian Affairs and the Indian Health Service." (Turtlemountaintribe.businesscatalyst.com)

Dunseith has a number of community assets and resources that can be mobilized to address population health improvement. In terms of physical assets and features, the community is known for being the gateway to the International Peace Gardens and is located in the foothills

of the Turtle Mountains on the junction of Hwy 5 and U.S. 281. Dunseith includes a beautiful golf course, two medical clinics, shopping facilities and motel. Rolla is known for its small town living atmosphere, seven churches, an accredited school system, modern medical facilities including a 25 bed critical access hospital,

two medical clinics, a private dental practice and is home to several industries that include complete selection of stores, restaurants and services. The city of Rolette features various businesses, a beautiful 9 hole golf course, a K -12 school system, swimming pool and city parks. The Rolette medical community consists of a medical and dental clinic as well as a 48 bed long term care center.

Lastly, St. John is nestled on the edge of the Turtle Mountains. St. John is home of the Rolette County Historical Society, which houses a lot of the communities histories. Mainly a residential community, it boasts all the necessary services such as a grocery store, Hardware and Plumbing Supply, Gas Station, restaurant, lounge, churches, First Responders for medical needs, and a new public school.

Resources and programs in Rolette County include:

- Thrifty White Pharmacy Rolette, N.D.
- Belcourt Drug- Belcourt
- Dunseith Drug-Dunseith
- Rolla Drug- Rolla
- Indian Health Services- Belcourt and Dunseith
- Tribal Health Belcourt
- Lake Region Human Services- Rolla
- Hospitals located in Bottineau, Rolla, Belcourt and Rugby
- Northland Community Health Center Rolla
- Northland Community Health Center -Rolette
- Presentation Clinic- Rolla
- Multiple Churches
- Rolla and Rolette Public Libraries
- Dental Clinics in Rolla , Rolette and Indian Health Service
- Official Newspaper (Turtle Mountain Star)
- Tribal newspaper (Turtle Mountain Times)
- 8 schools located on state and tribal lands

Senior centers are located in Rolette, Rolla, Belcourt, St. John, and Dunseith.

### **Assessment Process**

The Center for Rural Health provided substantial support to Rolette County Public Health in conducting this needs assessment. The Center for Rural Health is one of the nation's most experienced organizations committed to providing leadership in rural health. Its mission is to connect resources and knowledge to strengthen the health of people in rural communities. As the federally designated State Office of Rural Health (SORH) for the state and the home to the North Dakota Medicare Rural Hospital Flexibility (Flex) program, the Center connects the School of Medicine and Health Sciences and the university to rural communities and their health institutions to facilitate developing and maintaining rural health delivery systems. In this capacity the Center works both at a national level and at state and community levels.

The assessment process was collaborative. Professionals from Rolette County Public Health were heavily involved in planning and implementing the process. They met regularly by telephone conference and via email with representatives from the Center for Rural Health. Input on designing the assessment process was sought from public health professionals who work in the rural parts of the state, as well as those with years of experience serving the population of Rolette County. The Community Group (described in more detail below) provided in-depth information and informed the assessment in terms of community perceptions, community resources, community needs, and ideas for improving the health of the population and health care services. Representatives from Rolette County Public Health were involved considerably in planning the Community Group meetings. Members of the Community Group itself comprised many residents from outside the hospital and health department, including representatives from local government, education, and law enforcement.

A collaborative effort that took into account input from health organizations around the state led to the development of the survey instrument used in this assessment. The North Dakota Department of Health's public health liaison organized a series of meetings that garnered input from the state's health officer, local public health unit professionals from around North Dakota, representatives of the Center for Rural Health, and representatives from North Dakota State University. The collaborative process involved multiple revisions to the template survey instrument that in the end reflected input from all of the constituency groups. Those providing input had diverse opinions on the best way to identify and collect data.

As part of the assessment's overall collaborative process, the Center for Rural Health spearheaded efforts to collect data for the assessment in a variety of ways: (1) a survey solicited feedback from area residents; (2) community leaders representing the broad interests of the community took part in one-on-one key informant interviews; (3) the Community Group comprised of community leaders and area residents was convened to discuss area health needs and inform the assessment process; and (4) a wide range of secondary sources of data was examined, providing information on a multitude of measures including demographics; health conditions, indicators, and outcomes; rates of preventive measures; rates of disease; and at-risk behaviors.

Detailed below are the methods undertaken to gather data for this assessment by convening a Community Group, conducting key informant interviews, soliciting feedback about health needs via a survey, and researching secondary data.

#### **Community Group**

A Community Group consisting of 22 community members was convened and first met on June 16, 2015. During this first Community Group meeting, group members were introduced to the needs assessment process, reviewed basic demographic information about Rolette County, and served as a focus group. Focus group topics included community assets and challenges, the general health needs of the community, community concerns, and suggestions for improving the community's health.

The Community Group met again on October 29, 2015, to continue this process. At the second meeting the Community Group reviewed survey results, findings from key informant interviews and the focus group, and a wide range of secondary data relating to the general health of the population in Rolette County. The group then identified and prioritized the community's health needs as well as brainstormed strategies to help meet prioritized needs.

Members of the Community Group will represent the broad interests of the communities of Rolette County. Included will be representatives of the health community, education, law enforcement, and local government. Not all members of the group will be present at both meetings.

#### **Interviews**

One-on-one interviews with four (4) key informants were conducted in person in Rolla, North Dakota on June 16, 2015 and eight (8) by telephone on June 17 through June 19, 2015. Representatives from the Center for Rural Health conducted the interviews. Participating in interviews were key informants who could provide insights into the community's health needs.

Topics covered during the interviews included the general health needs of the community, the general health of the community, community concerns, delivery of health care by local providers and health organizations, awareness of health services offered locally, barriers to receiving health services, and suggestions for improving collaboration within the community.

#### **Survey**

A survey was distributed to gather feedback from the community. The survey was not intended to be a scientific or statistically valid sampling of the population. Rather, it was designed to be an additional tool for collecting qualitative data from the community at large – specifically; information related to community-perceived health needs.

The survey was distributed to various residents of Rolette County. The survey tool was designed to:

- Learn of the good things in the community and the community's concerns;
- Understand perceptions and attitudes about the health of the community, and hear suggestions for improvement; and
- Learn more about how local health services are used by residents.

Specifically, the survey covered the following topics: residents' perceptions about community assets and challenges, levels of collaboration within the community, broad areas of community and health concerns, need for health services, awareness of certain available services, barriers to using local health care, preferences for using local health care versus traveling to other facilities, travel time to their clinic and hospital, use of preventive care, use of public health services, suggestions to improve community health, and basic demographic information.

Approximately 1,500 community member surveys were available for distribution in Rolette County. The surveys were distributed by Community Coalition members, at flu shot clinics, through Rolette County Public Health, and at other local public venues. To help ensure anonymity, included with each survey was a postage-paid return envelope to the Center for Rural Health. In addition, to help make the survey as widely available as possible, residents also could request a survey by calling Rolette County Public Health.

Area residents also were given the option of completing an online version of the survey, which was publicized in the local newspaper, radio, and by Rolette County Public Health. One hundred thirty-six (136) online surveys were completed. The survey period ran from May 1 to June 30, 2015. In total, counting both paper and online surveys, 589 community member surveys were submitted.

#### **Secondary Data**

Secondary data was collected and analyzed to provide descriptions of: (1) population demographics, (2) general health issues (including any population groups with particular health issues), and (3) contributing causes of community health issues. Data were collected from a variety of sources including the U.S. Census Bureau; the North Dakota Department of Health; the Robert Wood Johnson Foundation's County Health Rankings (which pulls data from 20 primary data sources); the National Survey of Children's Health Data Resource Center; the Centers for Disease Control and Prevention; the North Dakota Behavioral Risk Factor Surveillance System; and the National Center for Health Statistics.

### **Demographic Information**

Table 1 summarizes general demographic and geographic data about Rolette County.

TABLE 1: ROLETTE COUNTY: INFORMATION AND DEMOGRAPHICS (From 2010 Census/2012 American Community Survey; more recent estimates used where available)				
	Rolette County	North Dakota		
Population, 2015 est.	14,582	723,393		
American Indian and Alaskan Native	76.6%	5.4%		
Non-Hispanic white	20.0%	87.3%		
Asian	0.1%	1.2%		
Hispanic	1.5%	2.9%		
Persons under 18 years, 2015 est.	33.3%	22.5%		
Persons 65 years or older, 2013 est.	10.1%	14.2%		
Females	50.6%	48.9%		
Rural	100.0%	40.1%		
High School Graduation	65%	85%		
Children in Poverty	33%	12.0%		
Unemployment	12.9%	2.9%		

The population of North Dakota has grown in recent years, Rolette County has seen a similar increase in population since 2010, as the U.S. Census Bureau estimates show that the county's population increased from 2010 (13,998) to 2013 (14,582). Demographic information and trends that have implications for the community's health and the delivery of health care include:

- A moderate rate of population increase, especially during a three-year period, can indicate that services may not have the capacity or capability to meet the needs of all residents.
- Increased need for access to medical care; the community is lacking access to specialty medicine.
- High rate of unemployment, in comparison to the state rate.
- Especially low high school graduation rates in comparison to state rates.

### **Health Conditions, Behaviors, and Outcomes**

As noted above, several sources of secondary data were reviewed to inform this assessment. The data are presented below in three categories: (1) County Health Rankings, (2) the public health community profile, and (3) children's health.

#### **County Health Rankings**

The Robert Wood Johnson Foundation, in collaboration with the University of Wisconsin Population Health Institute, has developed County Health Rankings to illustrate community health needs and provide guidance for actions toward improved health. In this report, Rolette County is compared to North Dakota rates and national benchmarks on various topics ranging from individual health behaviors to the quality of health care.

The data used in the 2015 County Health Rankings are pulled from more than 20 data sources and then are compiled to create county rankings. Counties in each of the 50 states are ranked according to summaries of a variety of health measures. Those having high ranks, such as 1 or 2, are considered to be the "healthiest." Counties are ranked on both health outcomes and health factors. Below is a breakdown of the variables that influence a county's rank. A model of the 2015 County Health Rankings – a flow chart of how a county's rank is determined – may be found in Appendix B. For further information, visit the County Health Rankings website at <a href="https://www.countyhealthrankings.org">www.countyhealthrankings.org</a>.

#### **Health Outcomes**

- Length of life
- · Quality of life

#### **Health Factors**

- Health Behavior
  - o Smoking
  - Diet and exercise
  - o Alcohol and drug use
  - Sexual activity
- Clinical Care
  - Access to care
  - Quality of care

#### **Health Factors** (continued)

- Social and Economic Factors
  - o Education
  - o Employment
  - o Income
  - Family and social support
  - Community safety
- Physical Environment
  - Air and water quality
  - o Housing and transit

Table 2 summarizes the pertinent information gathered by County Health Rankings as it relates to Rolette County. It is important to note that these statistics describe the population of a county, regardless of where county residents choose to receive their medical care. In other words, all of the following statistics are based on the health behaviors and conditions of the

county's residents, not necessarily the patients and clients of Rolette County Public Health or of particular medical facilities.

For most of the measures included in the rankings, the County Health Rankings' authors have calculated the "Top U.S. Performers" for 2015. The Top Performer number marks the point at which only 10% of counties in the nation do better, i.e., the 90th percentile or 10th percentile, depending on whether the measure is framed positively (such as high school graduation) or negatively (such as adult smoking).

Rolette County's rankings within the state are also included in the summary below. For example, Rolette County ranks 46 out of 47 ranked counties in North Dakota on health outcomes and 47<sup>th</sup> on health factors. The measures marked with a red checkmark (✓) are those where Rolette County is not measuring up to the state rate/percentage; a blue checkmark (✓) indicates that the county is not meeting the U.S. Top 10% rate on that measure. Measures that are not marked with a colored checkmark, but are marked with a smiling icon (☺) indicate that the county is doing better than the U.S. Top 10%.

TABLE 2: SELECTED MEASURES FROM <i>COUNTY HEALTH RANKINGS</i> – ROLETTE COUNTY				
	Rolette County	U.S. Top 10%	North Dakota	
Ranking: Outcomes	46 <sup>th</sup>		(of 47)

Drinking water violations	0% ©	0%	3%	

The data from County Health Rankings show that Rolette County is doing more poorly as compared to the rest of North Dakota on measures of health *outcomes*, landing at or below rates for North Dakota counties, and worse than the U.S. Top 10%. On health *factors*, however,

Severe housing problems

22%✓ ✓

9%

✓ = Not meeting North Dakota average

✓ = Not meeting U.S. Top 10% Performers

© = Meeting or exceeding U.S. Top 10% Performers

11%

Rolette County is doing well in areas of drinking water quality, lack of violent crime, and food environment index, meeting and exceeding the U.S. Top Performers and the North Dakota averages.

Rolette County lags the state on the following reported measures:

- Premature death
- Self-reported health (poor or fair health, poor physical health days, poor mental health days)
- Low birth weight
- Adult smoking
- Adult obesity
- Unemployment
- Teen birth rate
- Diabetic and mammography screening
- Children in poverty
- Children in single-parent households
- Injury deaths
- Excessive drinking
- Severe housing problems
- Sexually transmitted infections
- Sufficient numbers of primary care physicians and dentists

Rolette County's unemployment rate is drastically higher than North Dakota's and the U.S. Top 10% ratings. A few of the other measures are particularly concerning as well:

- Adult smoking and obesity are at least 10% higher than the North Dakota averages, as well as the U.S. Top 10% rankings.
- The rate of sexually transmitted infections is three times the North Dakota average, and more than ten times higher than the U.S. Top 10% rankings.
- Premature death rankings are approximately three times higher in Rolette County than the North Dakota and U.S. Top 10% rankings.

In addition to the reported rates and levels of some of these measures, also concerning are the trends indicating that several measures are getting worse. For example, as shown in Figure 2, the adult obesity rate has increased since 2004 and has a rate higher than the national and state average.

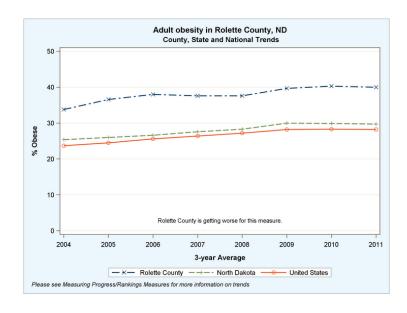

Figure 2 - Rising rate of adult obesity in Rolette County

While number of children living in poverty has decreased from 2009 to 2013, the overall rate increased dramatically in 2011 and has now begun to decrease in 2012 to 2013, as illustrated in Figure 3.

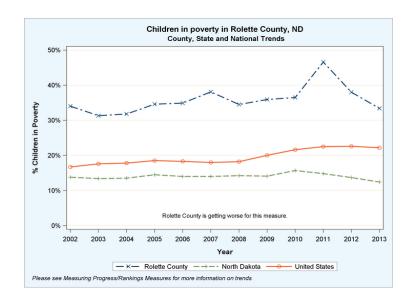

Figure 3 -Rising rate of children in poverty in Rolette County

The rate of physical inactivity in Rolette County is higher than both the state and national average, and has seen a steady increase since 2005, as shown in Figure 4.

Physical inactivity in Rolette County, ND County, State and National Trends 50 40 % Physically Inactive Rolette County is getting worse for this measure 2004 2005 2009 2010 2011 2007 2008 3-year Average — X— Rolette County — → — - North Dakota — → United States Please see Measuring Progress/Rankings Measures for more information on trends

Figure 4 – Rate of physical inactivity in Rolette County

#### **Public Health Community Health Profile**

Appendix C is the North Dakota Department of Health's community health profile for the Rolette County Health District. Prepared by the North Dakota Department of Health, the profile includes county-level information about population and demographic characteristics, birth and death data, behavioral risk factors, crime, and child health indicators. In Rolette County, the most commonly reported causes of death were heart disease, cancer, stroke, Alzheimer's disease, and COPD. A graph illustrating leading causes of death in various age groups may be found in Appendix C.

#### **Children's Health**

The National Survey of Children's Health touches on multiple intersecting aspects of children's lives. Data are not available at the county level; listed below is information about children's health in North Dakota. The full survey includes physical and mental health status, access to quality health care, and information on the child's family, neighborhood, and social context. Data are from 2011-12. More information about the survey may be found at: www.childhealthdata.org/learn/NSCH.

Key measures of the statewide data are summarized below. The rates highlighted in **red** signify that the state is faring worse on that measure than the national average.

TABLE 3: SELECTED MEASURES REGARDING CHILDREN'S HEALTH (For children aged 0-17 unless noted otherwise)			
Health Status	North Dakota	National	
Children born premature (3 or more weeks early)	10.8%	11.6%	
Children 10-17 overweight or obese	35.8%	31.3%	
Children 0-5 who were ever breastfed	79.4%	79.2%	
Children 6-17 who missed 11 or more days of school	4.6%	6.2%	
Health Care			
Children currently insured	93.5%	94.5%	
Children who had preventive medical visit in past year	78.6%	84.4%	
Children who had preventive dental visit in past year	74.6%	77.2%	
Young children (10 mos5 yrs.) receiving standardized screening for developmental or behavioral problems	20.7%	30.8%	
Children aged 2-17 with problems requiring counseling who received needed mental health care	86.3%	61.0%	
Family Life			
Children whose families eat meals together 4 or more times per week	83.0%	78.4%	
Children who live in households where someone smokes	29.8%	24.1%	
Neighborhood			
Children who live in neighborhood with a park, sidewalks, a library, and a community center	58.9%	54.1%	
Children living in neighborhoods with poorly kept or rundown housing	12.7%	16.2%	
Children living in neighborhood that's usually or always safe	94.0%	86.6%	

The data on children's health and conditions reveal that while North Dakota is doing better than the national averages on a few measures, it is not measuring up to the national averages with respect to:

- Obese or overweight children
- Children with health insurance
- Preventive primary care and dentist visits
- Developmental/behavioral screening
- Children in smoking households

Importantly, more than one in five of the state's children are not receiving an annual preventive medical visit or a preventive dental visit. Lack of preventive care now affects these children's future health status.

Table 4 includes selected county-level measures regarding children's health in North Dakota. The data come from North Dakota KIDS COUNT, a national and state-by-state effort to track the status of children, sponsored by the Annie E. Casey Foundation. KIDS COUNT data focus on main components of children's well-being; more information about KIDS COUNT is available at www.ndkidscount.org. The measures highlighted in **red** in the table are those on which Rolette County is doing worse than the state average, the year the most recent data is noted.

The data shows that Rolette County is performing worse than the North Dakota average on 6 of the 7 examined measures. The most marked difference was on both the Medicaid recipients' category, as well as those who are enrolled in the Supplemental Nutrition Assistance Program (SNAP).

TABLE 4: SELECTED COUNTY-LEVEL MEASURES REGARDING CHILDREN'S HEALTH			
	Rolette County	North Dakota	
Uninsured children (% of population age 0-18), 2012	14%	7.3%	
Uninsured children below 200% of poverty (% of population), 2012	54.9%	51.9%	
Medicaid recipient (% of population age 0-20), 2013	69.1%	28.0%	
Children enrolled in Healthy Steps (% of population age 0-18), 2013	2.2%	2.5%	
Supplemental Nutrition Assistance Program (SNAP) recipients (% of population age 0-18), 2013	68.8%	23.0%	
Licensed child care capacity (% of population age 0-13), 2014	31.3%	40.0%	
High school dropouts (% of grade 9-12 enrollment), 2013	9.9%	2.8%	

### **Survey Results**

As noted above, 589 community members took the written survey in communities throughout the county. The survey requested that respondents list their home zip code. While not all respondents provided a zip code, 461 did, revealing that while the large majority of respondents lived in Rolla, large percentages also lived in smaller communities in the county, such as Belcourt, Dunseith, Rolette and St. John. These results are shown below.

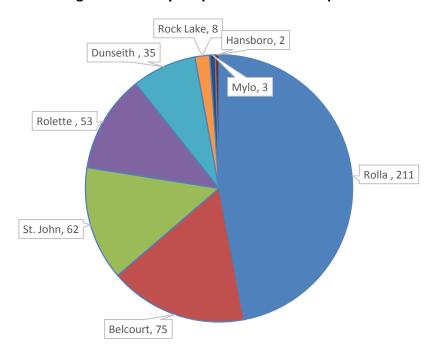

Figure 5: Survey Respondents' Home Zip Code

Survey results are reported in six categories: demographics; health care access; community assets, challenges, and collaboration; community concerns; delivery of health care; and other concerns or suggestions to improve health.

#### **Survey Demographics**

To better understand the perspectives being offered by survey respondents, survey-takers were asked a few demographic questions. Throughout this report, numbers (N) instead of percentages (%) are reported because percentages can be misleading with smaller numbers. Survey respondents were not required to answer all survey questions; they were free to skip any questions they wished.

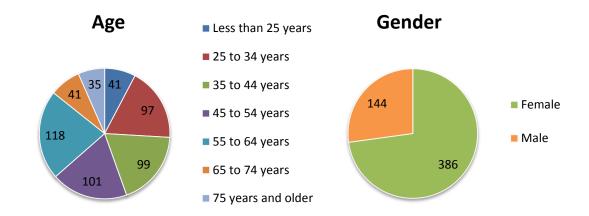

With respect to demographics of those who chose to take the survey:

- Over 55% (N=295) were aged 45 or older, although there was a fairly even distribution of ages.
- A large majority (N=389) were female.
- Slightly over half of respondents (N=284) had associate's degrees or higher, with a plurality of respondents (N=143) having bachelor's degrees.

- Most (N=347) worked full-time, or were (N=61) retired.
- A minority of respondents (N=241) had household incomes of less than \$50,000, although there was a fairly even distribution of household income.

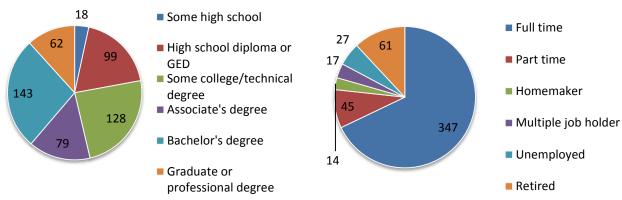

Figure 6 shows these demographic characteristics. It illustrates the wide range of community members' household income and indicates how this assessment took into account input from parties who represent the varied interests of the community served, including wide age ranges, those in diverse work situations, and lower-income community members. Of those who provided a household income, 116 community members reported a household income of less than \$25,000, with 55 of those indicating a household income of less than \$15,000.

**Figure 6: Demographics of Survey Respondents** 

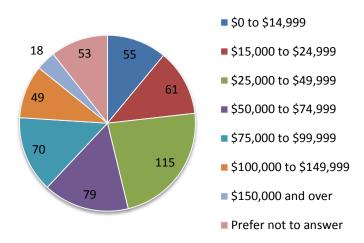

## Level Employment Status

#### **Household Income**

#### **Health Care Access**

Community members were asked how far they lived from the hospital and clinic they usually go to. A plurality (N=210) reported living less than 10 minutes from the hospital they usually go to, while 44 respondents indicated they live more than an hour from the hospital they usually go to. Driving distances, along with lack of transportation options, can have a major effect on access to health care services, especially in winter when weather conditions lead to hazardous driving conditions. With respect to distance to respondents' clinic of choice, a vast majority (N=259) said they lived within 10 minutes from the clinic. More than 30 respondents reported driving more than an hour to the clinic they usually go to. Figures 7 and 8 illustrate these results.

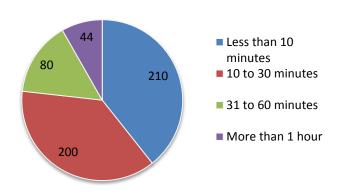

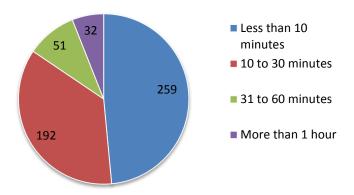

Figure 7: Respondent Travel Time to Hospital

Community members also were asked what, if any, health insurance they have. Health insurance status often is associated with whether people have access to health care. Over 50 of the respondents reported having no health insurance or being under-insured. The most common insurance types were insurance through one's employer (N=256), and private insurance (N=123), and Medicare (N=91).

Insurance through employer 256 Private insurance 123 Medicare Medicaid No insurance/not enough insurance Other 47 Veteran's Health Care Benefits 50 100 150 200 250 300

Figure 9: Insurance Status

#### **Community Assets, Challenges, and Collaboration**

Survey-takers were asked what they perceived as the best things about their community in five categories: people, services and resources, quality of life, geographic setting, and activities. In each category, respondents were given a list of choices and asked to pick the top three. Respondents occasionally selected less than three or more than three choices within each category. If more than three choices were selected, their response was not counted. The results indicate there is consensus (with 300 or more respondents agreeing) that community assets include:

- Family friendly (N=415)
- Friendly and helpful people (N=387)
- Simple, laidback lifestyle (N=368)
- Recreational and sports activities (N=334)
- Quality school systems and programs for youth (N=307)

Figure 10: Best Things about the PEOPLE in Your Community

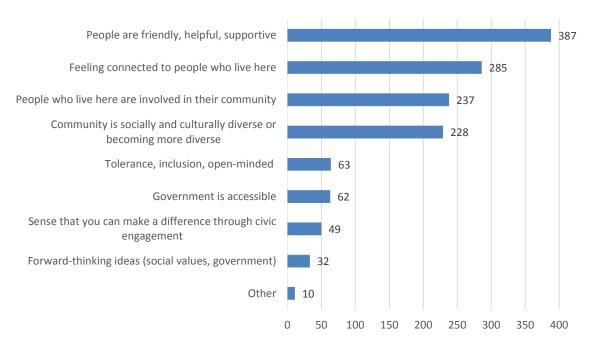

Figure 11: Best Things about the SERVICES AND RESOURCES in Your Community

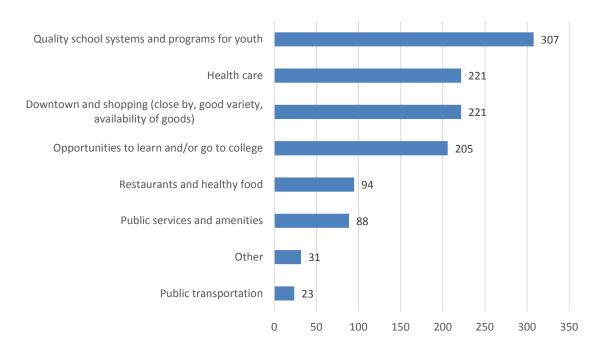

Figure 12: Best Things about the QUALITY OF LIFE in Your Community

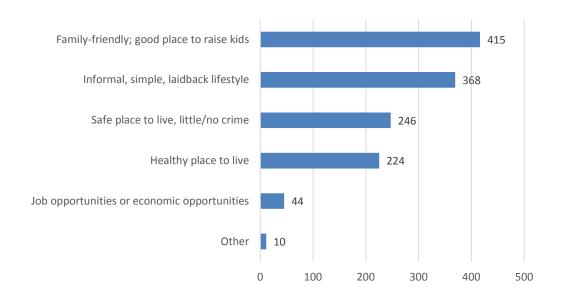

Figure 13: Best Things about the GEOGRAPHIC SETTING of Your Community

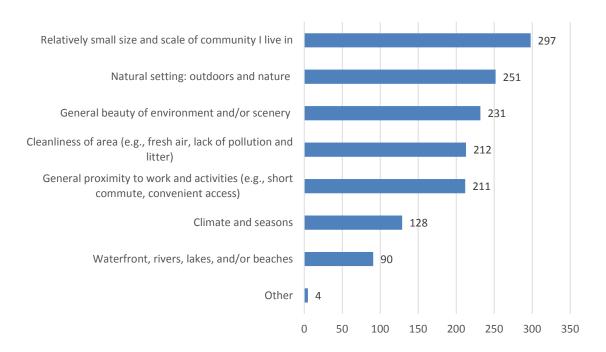

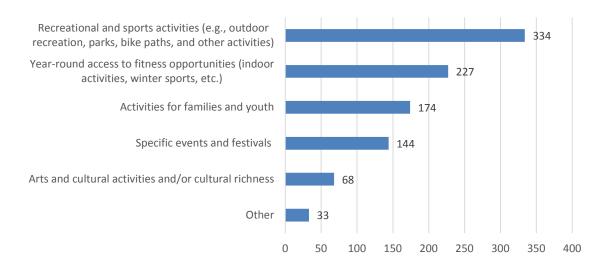

Figure 14: Best Thing about the ACTIVITIES in Your Community

The survey also included the question, "What are other 'best things' about your community that are not listed in the questions above?", with 129 responses received. The most common response (N=42) revolved around the friendliness of the community members and the sense of a caring and helpful place. Next most common (N=17) was a mention of the community being family-friendly, and (N=13) was the number and variety of active churches in the community. Also cited were: sense of small town life (N=13), and "everyone knowing everyone" (N=12). Specific responses included:

- Everyone's willing to lend a helping hand to better a part of the community.
- Most churches work together if needed; youth groups are active.
- Safe community where children can grow and thrive in a community that cares about one another.

In another open-ended question, residents were asked, "What are the major challenges facing your community?" with 368 responses received. The most common responses (N=80) related to a perceived lack employment opportunities. Other commonly cited challenges include:

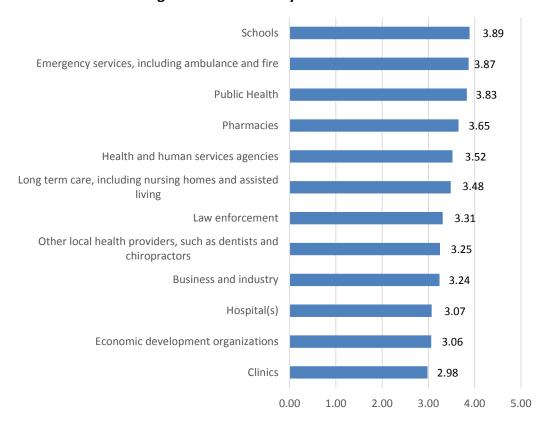

- Drug use and abuse (N=64)
- Activities for youth, families, and adults (N=62)
- Healthcare access (providers) (N=43)
- Infrastructure (roads, water) (N=43)
- Crime and violence (N=42)
- Economic development (including businesses) (N=33)
- Alcohol use and abuse (N=31)

Specific comments provide some insights into the reasoning behind these issues being singled out as community challenges:

- Competitive pay for local jobs.
- No drug/alcohol enforcement.

- No community center for kids.
- No animal center/control.
- Crime rate is on a rise along with drug use.
- Difficulty bringing professional health care providers to rural areas.
- Lack of activities for young people and adults as well.

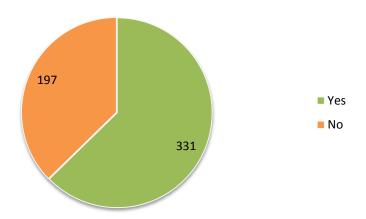

Those taking the survey generally agreed that when it comes to collaboration among various organizations and constituencies in the community, there was room for improvement. Respondents were asked to rate the level of collaboration, or "how well these groups work with others in the community," on a scale of 1 to 5. The results show that residents perceived schools, emergency services, and public health, as having the most effective collaboration with other community stakeholders. Groups that were perceived as needing improvement in collaborating included the hospital(s), economic development organizations, the clinics.

**Figure 15: Community Collaboration** 

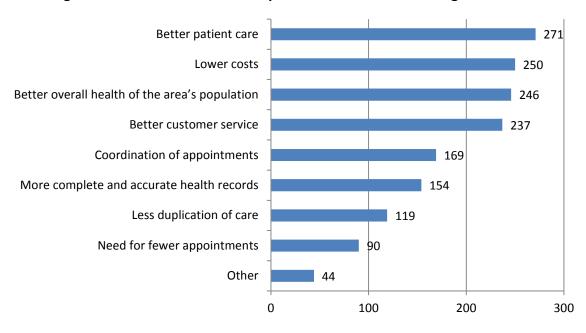

Survey-takers were asked whether they believe health-related organizations in the community are working together to improve the overall health of the area population. As shown in Figure 16, by a majority of residents answered this question in the affirmative.

Figure 16: Coordination to Improve Overall Population Health

To better understand residents' perceptions about better coordination and collaboration among health care organizations, they were asked what they thought would result from health entities working together. As shown in Figure 17, the highest response was better patient care (N=271), followed by lower costs (N=250), and better overall population health (N=246). Respondents were less inclined to believe that better care coordination would mean a need for fewer appointments (N=90).

Figure 17: Potential Effects of Improved Collaboration among Health Entities

Residents also were asked if they had any suggestions for ways that health-related organizations could work together to provide better services and improve overall health in the area, with 228 responses received. The most common response (N=87) was a recommendation for better collaboration and working relationships between providers, and facilities (hospital and clinic). Other suggestions made by more than one respondent include: less duplication of services (N=24), and better communication and sharing of information between providers (N=18).

The survey revealed that, by a large margin, residents learned about available health services through word of mouth from, for example, friends, family, co-workers, and neighbors. Other common sources of information about health services included the newspaper, health care and public health professionals, and advertising.

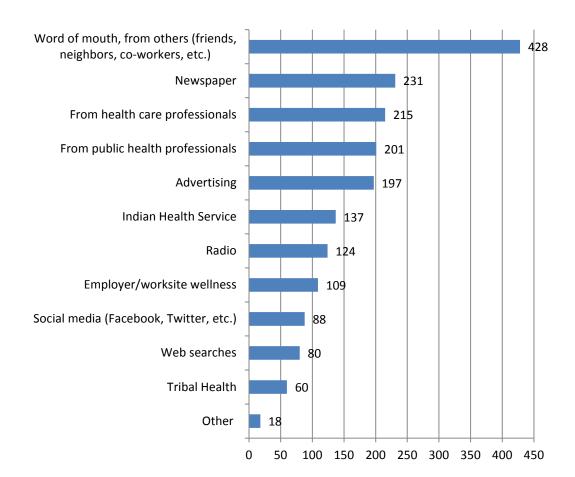

Figure 18: Sources of Information about Health Care Services

### **Community Concerns**

At the heart of this community health assessment was a section on the survey asking survey-takers to review a wide array of potential community and health concerns in five categories and rank them each on a scale of 1 to 5, with 5 being more of a concern and 1 being less of a concern. The five categories of potential concerns were:

- community/environmental concerns
- concerns about health services
- physical, mental health, and substance abuse concerns
- concerns specific to youth and children
- concerns about the aging population

Echoing the weight of respondents' comments in the survey question about community challenges, the two most highly ranked concerns were youth drug use and abuse (including

prescription drugs) (4.21 on a scale of 5.0) and adult drug use and abuse (including prescription drugs) (4.18). These issues stood out as the most important community/environmental concerns. The other issues that had a mean ranking on the 1-to-5 scale of at least 4.1 included:

- youth alcohol use and abuse (including binge drinking) (4.16)
- youth sexual health (including sexually transmitted infections) (4.13)
- adult alcohol use and abuse (including binge drinking) (4.12)
- diabetes (4.11)
- teen pregnancy (4.10)

Figures 19 through 23 illustrate these results.

Figure 19: Community/Environmental Concerns

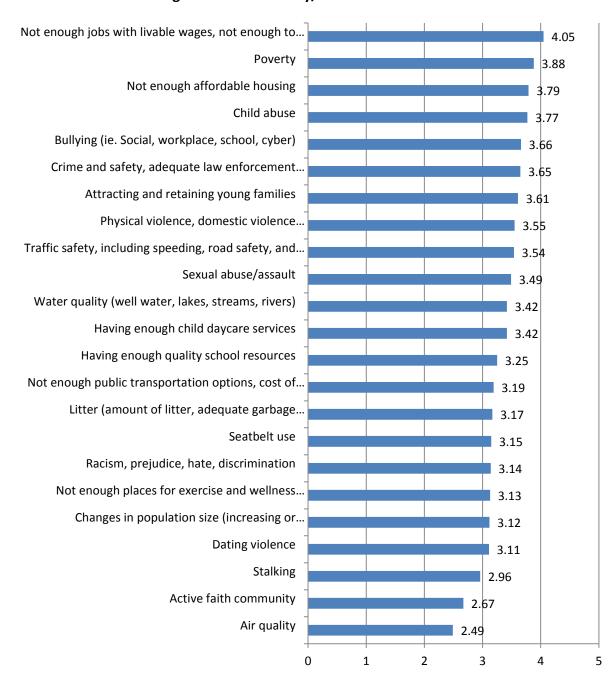

Figure 20: Concerns about Health Services

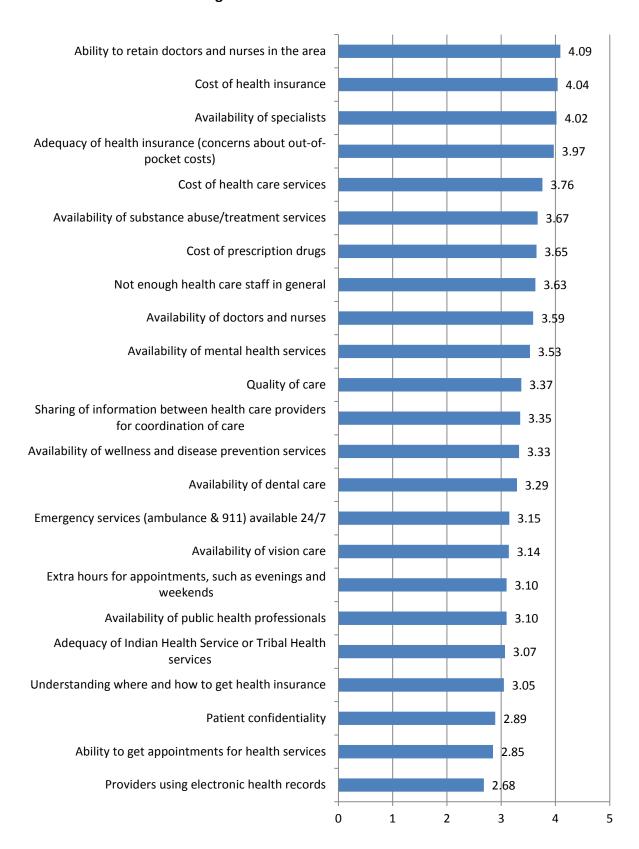

Figure 21: Physical, Mental Health, and Substance Abuse Concerns

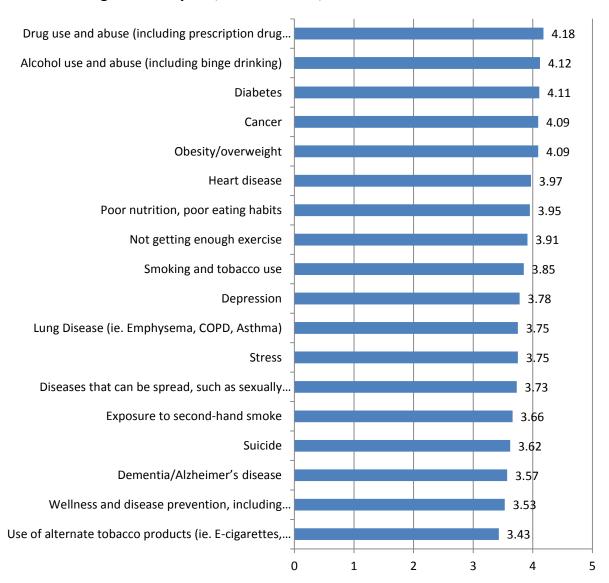

Figure 22: Concerns Specific to Youth and Children

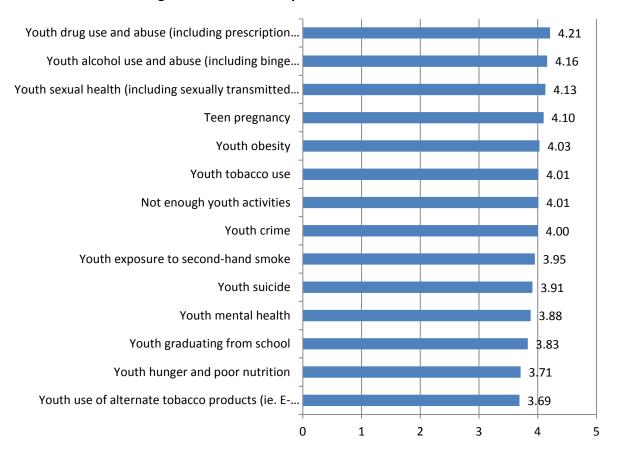

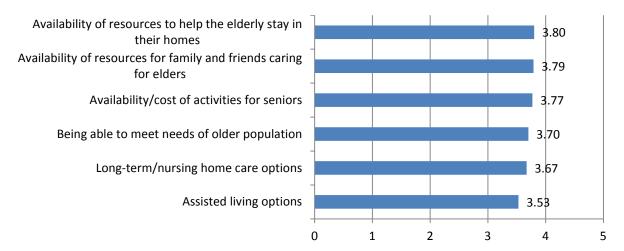

Figure 23: Concerns about the Aging Population

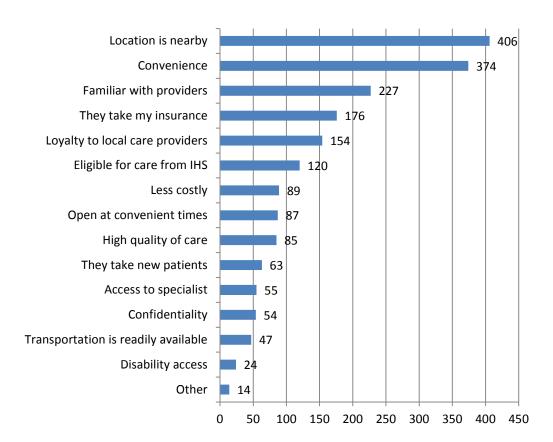

#### **Delivery of Health Care**

The survey asked community members why they seek health care services close to home and why they go out of the area for health care needs. Respondents were allowed to choose multiple reasons.

Nearby location (N=406) and convenience (N=374) topped the list of reasons that residents sought care locally, with familiarity with providers (N=227) also garnering a substantial number of responses.

With respect to the reasons community members seek health care services out of the area, the primary motivator was, by a considerable margin, to access a needed specialist (N=412). Other oft-cited reasons for seeking care elsewhere were referral (N=265) and for high quality of care (N=235). These results are illustrated in Figures 24 and 25.

Access to specialist 412 Referral 265 High quality of care 235 They take my insurance 130 Confidentiality 102 Familiar with providers 57 They take new patients 57 Eligible for contract health services... 53 Eligible for care from IHS 49 Not eligible for care from IHS 45 Open at convenient times 35 30 Less costly Other 23 Convenience 22 Loyalty to local service providers 20 Proximity 18 Disability access **1**6

Figure 25: Reasons Community Members Seek Services Out of the Area

The survey asked residents what they see as barriers to that prevent them or others from receiving health care. The most prevalent barrier perceived by residents was not enough doctors (N=238), followed by not enough specialists (N=230). There was little variance in the frequency with which other potential barriers were selected, with half of them identified by 127 to 144 respondents. Figure 26 illustrates these results.

50 100 150 200 250 300 350 400 450

0

Figure 26: Perceptions about Barriers to Care

### **Preventive Care and Public Health Services**

To gauge the impact and effectiveness of Rolette County's public health-oriented services in the community, the survey include questions specific to public health services. The results revealed that the majority of respondents or their family members had at least one interaction with Rolette County Public Health District within the previous year. They also showed that the most common services, by a wide margin, were influenza shots (N=301), followed by immunizations (N=221) and school health (N=160). When asked, in an open-ended question, about specific interactions with public health for them or their family, 226 responses were received. Results were similar, with the highest responses of shots/immunizations (N=93), and check-ups/wellness visits (N=24). These results are shown in Figures 27 and 28.

Figure 28: Use of Local Public Health Unit Services

Survey-takers also were asked where they turn for trusted health information. Overwhelmingly, residents identified their primary care provider (N=434) as the primary source of trusted health information. Respondents also relied on web searches/internet (N=197), public health professionals (N=196), and other health care professionals (N=194) for health-related information. These results are shown in Figure 29.

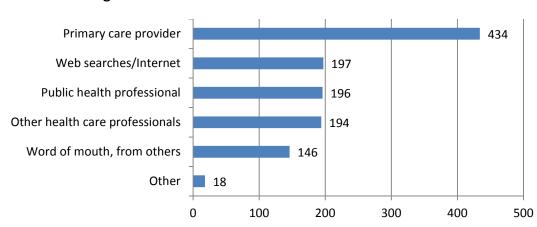

Figure 29: Where Turn for Trusted Health Information

# **Other Concerns and Suggestions to Improve Local Health**

The survey concluded with an open-ended question that asked, "Overall, please share concerns and suggestions to improve the delivery of local health care." Fewer residents responded to this question than to other open-ended survey questions, with a total of 120 responses.

Respondents shared a wide range of concerns and advice. The issues that were mentioned most frequently were: increase number of providers (general practitioners) (N=26), better working relationship/patient referrals between hospital and clinic (N=19), decrease in physician/provider/nurse turnover (N=12), increased access to specialists (N=10), and better customer service to patients (N=10). Specific comments included:

- Health providers are changing too often; patients do not get to know doctors, and doctors do not know patients.
- Clinics/hospital should work together to provide services, not compete with one another.

# **Findings from Interviews and Focus Group**

Questions about the health and well-being of the community, similar to those posed in the survey, were explored during a focus group session with the Community Group and during key informant interviews with community leaders and public health professionals. The themes that emerged from these sources were wide-ranging, with some directly associated with health care and others more rooted in broader community matters. Generally, overarching thematic issues that developed during the interviews and focus group can be grouped into four categories (listed in alphabetical order):

- Activities/services for youth
- Lack of collaboration with community
- Lack of employment/poverty
- Mental health (including substance abuse)

To provide context for these expressed needs, below are some of the comments that interviewees and focus group participants made about these issues:

### **Activities/services for youth**

- Concerns about youth not enough activities. As a community, which struggles with finances, we can't provide buildings to activities and such.
- Bullying is one that they have an issue with in the schools.
- Get youth more involved.
- Teenagers don't know where to go to ask questions, like around preventative pregnancy, etc.
- Lack of activities for children and youth is an issue. If kids don't fit into a certain mold (athletic), then they don't have anything to do. There aren't places for kids to go and just "hang out".

### **Lack of collaboration with community**

- There is a great deal of competition between service providers, which creates a hardship for those in rural communities.
- There is animosity between law enforcement agencies in both communities, where one agency won't go get a prisoner from the other agency. No collaboration.
- People travel elsewhere for healthcare because of the issues between the hospital and clinics.
- Communication between various health entities needs to be improved. They all try their best to serve their clients, and all have good intentions, but the collaboration has broken down, and fixing this starts with more efficient communication.

### **Lack of employment/poverty**

• Poverty is a huge issue, people are broke. This leads to crime, they steal to eat, sell something that's not theirs to make money for food.

- Lots of inadequate wages being paid for jobs. Not all jobs, but many of the jobs in this community.
- Not enough jobs available. We need vocation and manufacturing jobs.

### **Mental health (including substance abuse)**

- Drug use and abuse is an issue. Prescription drug specifically, meth is back in full force, and heroin is an issue.
- Lack of resources to support family issues like substance abuse and mental health.
   There isn't one entity that can plan and organize services around these issues for a family.
- Drinking and health concerns influencing the youth from elders, peers and grandparents.

# **Priority of Health Needs**

The Community Group held its second meeting on October 29, 2015. Twenty-two members of the group were in attendance at this meeting. A representative from the Center for Rural Health presented the group with a summary of this report's findings, including background and explanation about the secondary data, highlights from the survey results (including perceived community health and community concerns, community collaboration, and barriers to care), and findings from the focus group and key informant interviews.

Following the presentation of the assessment findings, and after consideration of and discussion about the findings, all members of the group were asked to identify what they perceived as the top five community health needs. All of the potential needs were listed on large poster boards, and each member was given five stickers so they could place a sticker next to each of the five needs they considered the most significant.

The results were totaled, and the concerns most often cited were:

- Excessive drinking adults and youth (16 votes)
- Activities and services for youth (14 votes)
- Illicit drug abuse (13 votes)
- Lack of collaboration with the community (11 votes)
- Number of healthcare providers (10 votes)
- Unemployment (10 votes)

The group then began the second portion of the Community Group meeting: a strategic planning session to find ways to address the prioritized significant needs. Because of time constraints, the group did not cover all of planning necessary to create a comprehensive improvement plan. Instead, they spent their time discussing reasons behind – and working on potential ideas to address – each of the six identified top needs. A steering committee or other group will meet to continue the work that was started by the Community Group and culminate with a community health improvement plan that can be executed.

### **Appendix A1 - Paper Survey Instrument**

## **Rolette County Health Survey**

Rolette County Public Health District is interested in hearing from you about community health concerns. The focus of this effort is to:

- . Learn of the good things in your community as well as concerns in the community
- Understand perceptions and attitudes about the health of the community, and hear suggestions for improvement
- Learn more about how local health services are used by you and other residents

If you prefer, you may take the survey online at <a href="http://tinyurl.com/RoletteCounty">http://tinyurl.com/RoletteCounty</a>. Surveys will be tabulated by the Center for Rural Health at the University of North Dakota School of Medicine and Health Sciences. Your responses are anonymous, and you may skip any question you do not want to answer. Your answers will be combined with other responses and reported only in total. If you have questions about the survey, you may contact Tiffany Knauf at 701.777.4048.

Surveys will be accepted through June 30, 2015. Your opinion matters - thank you in advance!

#### Community Assets and Collaboration

Please tell us about your community by **choosing up to three options** you most agree with in each category below:

Q1. Considering the PEOPLE in your community, the best things are (choose up to THREE):

Community is socially and culturally diverse or becoming more diverse	People who live here are involved in their community
Feeling connected to people who live here	Sense that you can make a difference through civic engagement
Forward-thinking ideas (social values, government)	Tolerance, inclusion, open-minded
Government is accessible	Other (please specify)
People are friendly, helpful, supportive	

Q2. Considering the SERVICES AND RESOURCES in your community, the best things are (choose up to THREE):

Downtown and shopping (close by, good variety, availability of goods)	Public services and amenities
Health care	Public transportation
Opportunities to learn and/or go to college	Restaurants and healthy food
Quality school systems and programs for youth	Other (please specify)

ųs.	Conside	ering the QUALITY OF LIFE In your communi	ity, the b	est things are (choose up to THREE):
		Family-friendly; good place to raise kids		Job opportunities or economic opportunities
		Healthy place to live		Safe place to live, little/no crime
		Informal, simple, laidback lifestyle		Other (please specify)
Q4.	Conside	ering the ACTIVITIES in your community, the	e best th	ings are (choose up to THREE):
		Activities for families and youth		Specific events and festivals
	0	Arts and cultural activities and/or cultural richness		Year-round access to fitness opportunities (indoor activities, winter sports, etc.)
	0	Recreational and sports activities (e.g., outdoor recreation, parks, bike paths, and other activities)		Other (please specify)
Q5. THREE		ering the GEOGRAPHIC SETTING in your con	nmunity	, the best things are (choose up to
		Cleanliness of area (e.g., fresh air, lack of pollution and litter)		Natural setting: outdoors and nature
		Climate and seasons		Relatively small size and scale of community I live in
		General beauty of environment and/or scenery		Waterfront, rivers, lakes, and/or beaches
	0	General proximity to work and activities (e.g., short commute, convenient access)		Other (please specify)
- -		other "best things" about your community to		not listed in the questions above?

Q8. For each choice on the next page please rank the level of collaboration, or how well these groups work with others in the community, on a scale of 1 to 5, with 1 being no collaboration (not working well with others) and 5 being excellent collaboration (working well with others).

Collaboration		bora tic	on c	Exc ollabo	Don't Know/Not Applicable	
	1	2	3	4	5	
Business and industry						
Clinics						
Economic development organizations						
Emergency services, including ambulance and fire						
Health and hum an services agencies						
Hospital(s)						
Lawenforcement						
Long term care, including nursing homes and assisted living						
Other local health providers, such as dentists and chiropractors						
Pharmacies						
Public Health						
Schools						

Q9. Do you believe that health-related organizations in overall health of the area population?  No Yes	n the area are working together to improve the
Q10. Which, if any, of the following do you think would providers and he alth-related organizations? (Choos Better customer service Better patient care Better overall health of the area's population Coordination of appointments Other (Please specify)  Q11. What suggestions do you have for health-related services and improve the overall health of the area	se ALL that apply.)  Less duplication of care  Lower costs  More complete and accurate health records  Need for fewer appointments  organizations to work together to provide better
Q12. Where do you find out what health services are  Advertising From public health professionals Indian Health Service Newspaper Radio Word of mouth, from others (friends, neighbors, co-workers, etc.)	available in your area? (Choose ALL that apply.)    From health care professionals   Social media (Facebook, Twitter, etc.)   Tribal Health   Web searches   Employer/worksite wellness   Other (Please specify)

### Community Concerns

Q13. Regarding the conditions in your community, in the following series of categories please rank each of the potential concerns on a scale of 1 to 5, with 1 being less of a concern and 5 being more of a concern:

Community/environmental concerns		Less of a concern			More of a concern			
	1	2	3	4	5			
Active faith community								
Attracting and retaining young families								
Not enough jobs with livable wages, not enough to live on								
Not enough affordable housing								
Poverty								
Changes in population size (increasing or decreasing)								
Crime and safety, adequate law enforcement personnel								
Water quality (well water, lakes, streams, rivers)								
Airquality								
Litter (amount of litter, adequate garbage collection)								
Having enough child daycare services								
Having enough quality school resources								
Not enough places for exercise and wellness activities								
Not enough public transportation options, cost of public transportation								
Racism, prejudice, hate, discrimination								
Seatbelt use								
Traffic safety, incl. speeding, road safety, and drunk/distracted driving								
Physical violence, domestic violence (spouse/partner/family)								
Child abuse (violence against children)								
Bullying (ie. social, workplace, school, cyber)								
Datingviolence								
Sexual abuse/assault								
Stalking								

Concerns about health services		Less of			e of ern
	1	2	3	4	5

Thank you for assisting us with this important survey!

## **Appendix A2 - Online Survey Instrument**

Rolette County Public Health District is interested in hearing from you about area health issues and concerns. The focus of this effort is to:

- · Learn of the good things in your community as well as concerns in the community.
- Understand perceptions and attitudes about the health of the community, and hear suggestions for improvement.
- · Learn more about how local health services are used by you and other residents

Surveys will be tabulated by the Center for Rural Health at the University of North Dakota School of Medicine and Health Sciences. Your responses are anonymous, and you may skip any question you do not want to answer. Your answers will be combined with other responses and reported only in total. If you have questions about the survey, you may contact Tiffany Knauf at 701.777.4048.

Surveys will be accepted through June 30, 2015. Your opinion matters - thank you in advance!

### **Community Assets and Collaboration**

Please tell us about your community by choosing up to three options you most agree with in each category below.

Cons	idering the PEOPLE in your community, the best things are (choose up to THREE):
	Community is socially and culturally diverse or becoming more diverse
	Feeling connected to people who live here
	Forward-thinking ideas (social values, government)
	Government is accessible
	People are friendly, helpful, supportive
	People who live here are involved in their community
	Sense that you can make a difference through civic engagement
	Tolerance, inclusion, open-minded
	Other (please specify)
Cons	idering the SERVICES AND RESOURCES in your community, the best things are (choose up to THREE):
	idering the SERVICES AND RESOURCES in your community, the best things are (choose up to THREE): Downtown and shopping (close by, good variety, availability of goods)
	Downtown and shopping (close by, good variety, availability of goods)
	Downtown and shopping (close by, good variety, availability of goods)  Health care
	Downtown and shopping (close by, good variety, availability of goods)  Health care  Opportunities to learn and/or go to college
	Downtown and shopping (close by, good variety, availability of goods)  Health care  Opportunities to learn and/or go to college  Quality school systems and programs for youth
	Downtown and shopping (close by, good variety, availability of goods)  Health care  Opportunities to learn and/or go to college  Quality school systems and programs for youth  Public services and amenities
	Downtown and shopping (close by, good variety, availability of goods)  Health care  Opportunities to learn and/or go to college  Quality school systems and programs for youth  Public services and amenities  Public transportation

Con	sidering the QUALITY OF LIFE in your community, the best things are (choose up to THREE):
	Family-friendly; good place to raise kids
	Healthy place to live
	Informal, simple, laidback lifestyle
	Job opportunities or economic opportunities
	Safe place to live, little/no crime
	Other (please specify)
Con	sidering the ACTIVITIES in your community, the best things are (choose up to THREE):
	Activities for families and youth
	Arts and cultural activities and/or cultural richness
	Recreational and sports activities (e.g., outdoor recreation, parks, bike paths, and other activities)
	Specific events and festivals
	Year-round access to fitness opportunities (indoor activities, winter sports, etc.)
	Other (please specify)
Con	sidering the GEOGRAPHIC SETTING in your community, the best things are (choose up to THREE):
	Cleanliness of area (e.g., fresh air, lack of pollution and litter)
	Climate and seasons
	General beauty of environment and/or scenery
	General proximity to work and activities (e.g., short commute, convenient access)
	Natural setting: outdoors and nature
	Relatively small size and scale of community I live in
	Waterfront, rivers, lakes, and/or beaches
	Other (please specify)
Wha	at are other "best things" about your community that are not listed in the questions above?

65+	1,607	11.0%	120,495	16.7%			

The Demographic Section of this report comes from the US Census Bureau (<a href="https://www.census.gov">www.census.gov</a>). Most tables are derived either from the Census estimates for 2013 or from the Community Population Survey aggregated over a several year period. The table header describes the specific years from which the data is derived. The table showing percent population change uses census data from 2000 also. Tables present number of persons and percentages which in almost all circumstances represent the category specific percentage of all persons referenced by the table (e.g., percentage of persons age 15 and older who are married). Age specific poverty rates represent the percentage of each age group which is in poverty (e.g., percentage of children under five years in poverty).

Race, 2013 Census Estimates

#### Vital Statistics Data

#### BIRTHS AND DEATHS DEFINITIONS

Vital Statistics Data comes from the birth and death records collected by the State of North Dakota aggregated over a five year period. All births and deaths represent the county of residence not the county of occurrence. The number of events is blocked if fewer than six. Formulas for calculating rates and ratios are as follows:

**Birth Rate** = Resident live births divided by the total resident population x 1000.

Pregnancies = Live births + Fetal deaths + Induced termination of pregnancy.

**Pregnancy Rate** = Total pregnancies divided b the total resident population x 1000.

Fertility Rate = Resident live births divided by female population (age 15-44) x 1000.

Teenage Birth Rate = Teenage births (age <20) divided by female teen population x 1000.

#### Teenage Pregnancy Rate =

Teenage pregnancies (age<20) divided by female teen population x 1000.

#### Out of Wedlock Live Birth Ratio =

Resident OOW live births divided by total resident live births x 1000.

#### Out of Wedlock Pregnancy Ratio =

Resident OOW pregnancies divided by total pregnancies x 1000.

#### Low Weight Ratio =

Low weight births (birth weight < 2500 grams) divided by total resident live births x 1000.

Infant Death Ratio = Number of infant deaths divided by the total resident live births x 1000.

Childhood & Adolescent Deaths = Deaths to individuals 1 - 19 years of age.

#### Childhood and Adolescent Death Rate =

Number of resident deaths (age 1 - 19) divided by population (age 1 - 19) x 100,000.

**Crude Death Rate** = Death events divided by population  $\times$  100,000.

Age-Adjusted Death Rate = Death events with age specific adjustments x 100,000 population.

#### ADULT BEHAVIORAL RISK FACTORS DEFINITION

The following three pages represent data received from the Adult Behavioral Risk Factor Surveillance Survey. The Adult Behavioral Risk Factor data are derived from aggregated data (the number of years specified is in the table) continuously collected by telephone survey from persons 18 years and older. All data is self-reported data. Numbers given are point estimate percentages followed by 95% confidence intervals. Statistical significance can be determined by comparing confidence intervals between two geographic areas. To be statistically significant, confidence may not overlap. For example the confidence intervals 9.3 (8.3-10.2) and 10.8 (10.0-11.6) overlap (see picture below) so the difference between the two numbers is not statistically significant. That means that substantial uncertainty remains whether the apparent difference is due to chance alone (due to sampling variation) rather than representing a true difference in the prevalence of the condition in the two populations. The less they overlap, the more likely it is that the point estimates represent truly different prevalences in the two populations.
